darkify19.github.io/carl-janzell-portfolio · github.com/Darkify19 · linkedin.com/in/carl-janzell-764399179

I build and run the HR systems UP Los Baños staff use every day, mostly Laravel and Filament apps that talk to each other over Kafka. The timekeeping app is mine, from the code to the server it runs on.

EXPERIENCE

University of the Philippines Los Baños · Contract — Jan 2025 – Present
Full-Stack Developer (Senior ICT Assistant) — Oct 2025 – Present
Full-Stack Developer (Programmer) — Jan 2025 – Oct 2025

- Lead developer of UPLB-TKS, the university's timekeeping system. It replaced paper time records and leave forms, and 921 people use it on an average workday (Aug–Oct 2026).
- Built the attendance rules: merging biometric and manual punches, grace periods and undertime.
- Built offline-first clock-in kiosks for staff without a desk. They handled 22.8% of all punches in the 180 days to Oct 2026.
- Built a demo mode with made-up employees, so the live system can be shown without exposing anyone's real data.
- Wrote the Kafka consumers that keep the timekeeping, performance and SALN apps in sync with the HR system of record.
- Set up role-based access across 30+ models, from HR-wide down to office-only and self-only views.
- Moved performance reviews into their own app, with an AI step that drafts reviews from task logs for a person to check.
- Deploy and run what I build: self-hosted CI runners, 661 tagged production deploys since Apr 2026, and a production audit that found 12 issues, each with a fix.
- Every release ships a plain-language "What's New" page for staff, drafted by AI and signed off by a person.
- Also: largest contributor to SALN asset-disclosure e-filing, holiday-pay rules in the new payroll system, and the DAME website.

ChatGenie — Nov 2024 – Jan 2025
Web Developer (probationary)

- Got in through their developer evaluation: learn Rails, GraphQL and Vue from zero, then ship real apps on them.
- Built samyang, a dating app, solo (see Projects).
- Worked the team's way: daily stand-ups, Jira tickets and Bitbucket pull requests.

DILG Cluster A, Laguna — Jan 2024 – May 2024
Web Developer (on-the-job trainee)

- Built the E-Justice System for barangay case records across Cluster A, and owned its database, API and user onboarding.

PROJECTS

filament-page-builder · github.com/Darkify19/filament-page-builder — Aug 2026 – Present

An open-source drag-and-drop page builder I maintain for the Filament community, listed in Filament's official plugin directory. One Composer package installs on Filament 3, 4 or 5, and it runs the page editor on the DAME website.

PHP 8.3 · Filament 3–5 · Livewire · Pest 4 (256 tests) · MIT · filamentphp.com/plugins/carl-janzell-page-builder

samyang · github.com/Darkify19/samyang-back, samyang-front — Nov 2024 – Dec 2024

A dating app I built solo in under two weeks for ChatGenie's evaluation: swipe and match, photos, messaging and an admin panel.

API: Ruby 3.3 · Rails 8 (API mode) · GraphQL · PostgreSQL · bcrypt sessions · Brakeman and RuboCop in CI · Render
Client: Vue 2.7 · Vuex · Vue Router · Apollo Client with file uploads · Cloudinary

SKILLS

Backend	PHP, Laravel, Filament, Livewire, Ruby on Rails, REST, GraphQL
Frontend	JavaScript, TypeScript, Vue, Vuex, Apollo, Alpine.js, Tailwind CSS
Data	MySQL and MariaDB, PostgreSQL, Redis, Kafka, RabbitMQ
Ops and testing	Linux, Nginx, Supervisor, GitHub Actions, Docker, PHPUnit, Pest
AI tooling	Claude Code, Cursor agents, agent skill files, human-in-the-loop features

EDUCATION AND TRAINING

B.S. Information Technology, Laguna State Polytechnic University, Los Baños — 2020 – 2024

UP ITDC 2025: IT project management, ICT governance, enterprise architecture, software testing, IS strategic planning. AUN/UP 2025: Identity Federation hackathon workshop.
