PROFESSIONAL SUMMARY

Primary developer of the timekeeping and performance platform serving 4,000+ employees at the University of the Philippines Los Baños — one app in a Kafka-linked ecosystem of HR and compliance systems that replaced the university's paper-based time, leave, and salary-document processes. 5,500+ commits across seven production repositories on Laravel 11–13 and Filament v3–v5, plus a Ruby on Rails GraphQL API with a Vue + Vuex client. Also build the AI agent infrastructure the team develops with: 190+ domain skill files, executable specifications, and two human-in-the-loop AI features in production.

TECHNICAL SKILLS

Languages PHP 8.2–8.4, Ruby 3.3, JavaScript / TypeScript, SQL

Backend Laravel 11 / 12 / 13, Filament v3–v5, Livewire 3 / 4, Ruby on Rails 8, REST & GraphQL APIs

Data & Messaging MySQL, MariaDB, PostgreSQL, Redis, Apache Kafka, RabbitMQ

Frontend Tailwind CSS 3 / 4, Vue 2 & 3 (Vuex, Apollo), Alpine.js, Blade, Vite

Architecture Event-driven microservices, RBAC (Spatie / Shield), approval workflows, PDF generation (DomPDF / FPDF), PII encryption

Quality & Delivery PHPUnit 11, Pest 4, Docker, GitHub Actions (self-hosted runners), Git / Bitbucket, Jira, Agile / Scrum

WORK EXPERIENCE

Full-Stack Developer — Senior ICT Assistant

Oct 2025 – Present

Full-Stack Developer — Programmer

Jan 2025 – Oct 2025

[University of the Philippines Los Baños](#) · [Los Baños, Laguna](#)

- **Primary developer of UPLB-TKS**, the university-wide timekeeping platform used by 4,000+ employees — 3,528 of 3,623 commits (97%). Replaced paper-based daily time records, leave filing, and certificates of service, and turned salary and clearance requirements into employee self-service.
- Built the attendance engine end to end: biometric and manual record merge, flexible cutoff periods, 15-minute grace-period undertime computation, and IP-based network validation of clock-ins.
- Designed a reusable approval-workflow state machine with per-transition audit logging, reused across leave, performance review, travel, and certificate modules — later extracted into its own Kafka-connected service.
- Build and maintain a Kafka-linked suite of HR & compliance systems across Laravel 11–13 and Filament v3–v5: consumers with data-contract enforcement, UUID standardization, and stable cross-app identity resolution (UUID → email → employee number).
- Architected dual Filament panels (HR admin + employee self-service) with role-based access across 30+ models — unscoped, office-scoped, and self-only tiers via Spatie Permissions and Filament Shield.
- **Largest single contributor to the SALN asset-disclosure system** (620 of 1,330 commits): Kafka consumer layer with transactional staging, and coordinate-mapped PDF generation overlaying data onto official government forms (FPDI).
- Own delivery end to end: GitHub Actions CI/CD on self-hosted runners, 500+ tagged releases, government-form PDF output (DTR, IPCR/SPMS, COS), web-push notifications, and guided-tour onboarding.

Web Developer Intern

Nov 2024 – Jan 2025

[ChatGenie](#) · [Philippines](#)

- Selected through a competitive screening program: 30 participants were required to self-study the company stack and pass staged technical and application-delivery assessments — 2 completed the program.
- Built full-featured applications end to end across Rails and Vue — a restaurant reservation system and a dating app with swipe/match mechanics, Apollo GraphQL client, Cloudinary uploads, and an admin panel (source public on GitHub).
- Contributed to e-commerce integration work across the stack: Rails GraphQL resolvers on the backend, a Vue 2 + Vuex SPA on the frontend.
- Worked in an Agile team: daily stand-ups, task and solution documentation in Atlassian Jira, and Bitbucket pull-request collaboration with senior developers.

Web Developer — On-the-Job Trainee

Jan 2024 – May 2024

[Department of the Interior and Local Government \(DILG\)](#) — [Cluster A, Laguna](#)

- Developed the E-Justice System for barangay case recording and reporting, rolled out across Cluster A, Laguna.
- Built the backend API integrations, owned the full database schema, and supported deployment and user onboarding across multiple cities and municipalities.

AI-ASSISTED ENGINEERING PRACTICE

- Authored 190+ agent skill files across seven repositories — YAML-triggered domain deep-dives, DRY catalogues of reusable traits and services, and documented gotchas — so AI agents work accurately inside each codebase.
- Shipped two human-in-the-loop AI features to production: a performance-review drafting pipeline that clusters employee task logs into rated functions, and an AI changelog generator behind a human review gate. Both are covered by unit and feature tests.
- Write executable specifications for agent delegation — full context payloads, per-deliverable requirements, execution checklists, and bash verification scripts with explicit “do not invent” guardrails.

SELECTED PROJECTS

UPLB-TKS — Timekeeping System

Laravel 11 · Filament v3 · Kafka · 2025–present

Primary developer (97% of 3,623 commits). Attendance, DTR, leave, performance review, certificates of service, and travel requests for 4,000+ personnel; the canonical leave-balance source consumed over REST by the rest of the ecosystem.

PerporManTask — Performance Management

Laravel 12 · Filament v5 · Kafka · 2026

Sole author (192 of 192 commits). Performance review extracted from the timekeeping monolith into its own Kafka-connected service — weighted target distribution validated to 100%, UP SPMS-compliant PDFs, and the AI drafting pipeline.

DAME UPLB — Department Website + CMS

Laravel 13 · Filament v5 · Pest 4 · 2026

Lead developer (98% of 293 commits). Faculty, academic program, research, and news CMS with slug-routed public profiles — the newest stack in the portfolio.

Samyang — Rails GraphQL API + Vue SPA

Ruby on Rails 8 · Vue 2 · Vuex · Apollo

Full-stack application outside the Laravel ecosystem: GraphQL API with a Vue + Vuex client, Apollo, Cloudinary uploads, swipe/match mechanics, and an admin panel. Source public.

EDUCATION

Laguna State Polytechnic University — Los Baños Campus

2020 – 2024

B.S. Information Technology — Major in Web & Mobile Application Development

TRAINING & CERTIFICATIONS

- **UP ITDC (2025)** — IT Project Management; ICT Governance; Enterprise Architecture; Software Testing in Higher Education Institutions; Information Systems Strategic Planning (DICT).
- **AUN / UP (2025)** — Identity Federation Infrastructure Hackathon Workshop.
